

Mert Efe Ünver

Fullstack Software Engineer

+90 505 494 11 46 · mertefeunver09@gmail.com · linkedin.com/in/mertefeunver · github.com/mertunver31 · Ankara, Türkiye

PROFESSIONAL SUMMARY

Fullstack software engineer who designs and ships web and mobile products end to end with React/Next.js and FastAPI. I work across every stage of a product — UI/UX, backend, deployment, and data — and have hands-on experience adding AI/LLM features and building data pipelines, backed by a strong eye for design. Two-time first-place winner (with my team) in inter-university engineering competitions and a Teknofest finalist, with a track record of independently building and launching live products.

TECHNICAL SKILLS

Languages: Python, TypeScript, JavaScript, Java, Dart, SQL

Web & Mobile: React, Next.js, FastAPI, Flutter, Tailwind CSS

AI / ML: PyTorch, Hugging Face Transformers, LoRA/PEFT, prompt engineering, RAG, OpenCV, MediaPipe

Data & Analytics: Web scraping (Selenium, BeautifulSoup), dataset curation, Power BI, DAX

Tools & Platforms: Git, Supabase, Vercel, Figma, FFmpeg, Postman, Playwright, ikas

AI Dev Tools: Claude Code, Gemini, Codex, Gemini CLI, Ollama, Alibaba Cloud (Qwen)

WORK EXPERIENCE

Pavo Group — Business Development Intern

May 2024 – Jun 2025 · Ankara

- Worked on an AI/LLM-integrated task-management tool to help automate tracking and optimize team workflows.
- Built comprehensive Power BI reports and dashboards with DAX to support executive decision-making.

Kristal Bulut Yazılım — Software Engineering Intern

Aug 2023 – Oct 2023 · Ankara

- Built and deployed a Python web-crawling system (Selenium, BeautifulSoup) collecting product data from 11+ e-commerce platforms into structured, labeled JSON datasets.

PROJECTS

Vitryn — Digital Showcase Platform · vitryn.co

Next.js · Supabase · Tailwind CSS · Vercel

- Designed and shipped a multi-tenant platform where curators and brands build and share their own digital showcases; handled UI, auth, and deployment end to end.

Memoire Vision — Computer Vision Project · 🏆 2× 1st Place

- Won 1st place (with my team) at Başkent University's "Genç Beyinler Yeni Fikirler 2025" and at Işık University's signal-processing conference. A deep-learning-based vision/signal-processing project, designed and presented end to end.

Cross-Attention ViT — Deepfake Detection (Academic) · github.com/mertunver31

PyTorch · Vision Transformer · FFT · EfficientNet

- M.S. Machine Learning & Ethics course project: a hybrid Vision Transformer (spatial + frequency streams fused via cross-attention) for detecting compressed deepfake videos. Reached 95.99% AUC-ROC / 89.13% accuracy on the SDFVD 2.0 dataset.

Blenz AI — Full-Stack AI Video Editor · blenzai.com

Next.js · FastAPI · OpenCV · FFmpeg · MediaPipe · Supabase

- Built a full-stack video editor with computer-vision and audio-visual processing; integrated a third-party generative-AI model into the rendering pipeline. React/Next.js frontend, Supabase auth/DB, deployed on Vercel.

Kesin Gelir — Serverless University-Preference Platform · kesingelir.com.tr

React · Next.js · Serverless

- Built a serverless frontend that dynamically fetches, processes, and renders large external datasets without dedicated backend infrastructure.

EDUCATION

M.S. in Computer Engineering (Thesis) — Gazi University, Ankara

Jan 2026 – Present

B.S. in Computer Engineering (Full Scholarship) — TED University, Ankara

Sep 2020 – Jul 2025

GPA: 3.23 / 4.0 · Minor: Applied Data Analytics

HONORS & AWARDS

🏆 **2× 1st Place** (with team) — inter-university engineering competitions (Baskent "Genç Beyinler Yeni Fikirler 2025"; Işık University signal-processing conference)
Teknofest Finalist (with team)
